A power over Ethernet multispan power supply with secure enclosure and monitoring. Every *Secure***PoE™** *unit complies with the IEEE 802.3:2012 standard (IEEE 802.3at/IEEE 802.3af). Secure***PoE™** *units will provide the full 30W of power to every port. All units are housed in secure tamper protected cases.*

One, two or four PoE output wall mount versions are available in secure indoor or exterior enclosures. 1U Rack-mount versions are available with 4 PoE ports per unit.

The PoE outputs have LED indication to show if a compatible device is connected and powered. In addition there are SPCO clean contacts for monitoring the power status of each output.

PoE multispan devices combine the reliability of a midspan device with the ease of an endspan unit.

The pre-patched unmanaged switch allows for one data connection (e.g. from network) to be connected to up to 4 PoE powered devices, whilst providing reliable power to these devices.

Multispan units can be located 100 meters away from existing network infrastructure and attached devices can be a further 100 meters from the *Secure***PoE™** Multispan unit.
