

Combined Exit Device

Exit button & Emergency Door Release

Range: Exit Devices

A new range of combined exit button and emergency door release products, to provide a convenient method of unlocking an electronic lock when exit is required or in the event of an emergency.

These combined units are supplied in a purpose made double gang surface back box, which means the unit can be installed quickly without fuss and ensures an exact fit for a much tidier installation.

The exit button options are standard stainless steel or high impact green dome. The green dome is particularly suited for users who require a larger "target" button - in homes for the elderly, for example.

The EDR's are supplied double pole as standard, and available as traditional break-glass or resettable.

Note:

Emergency door releases (EDR's) are generally fitted where there is no manual method to release an electronically locked door in the event of an emergency. These units are normally electrically connected in line (series) with "fail safe" locks, to remove power to the lock when the unit is activated - it is strongly recommended that any products fitted to fire escape doors must comply with local fire regulations.
