FP3 COMBINATION MANUAL CALL POINT

RESETTABLE CALL POINT

The FP3 is a resettable and frangible combination EN54-11 compliant manual call point. This gives the freedom to choose whether you wish to have the convenience of a resettable call point or the false alarm deterrence of a frangible call point. The unique mechanism, designed in the United Kingdom by CQR, allows a single key to test and reset the call point after activation. It has a visible warning flag and a LED to confirm activation. The FP3, with its modern attractive design, achieves the goal of an economically priced high specification manual call point.

FEATURES

- Each box contains both resettable (plastic) and frangible (glass) windows
- When used in resettable mode, the plastic element has a positive action replicating the feel of breaking glass.
- The plastic element avoids the need to fit glass elements which can be lost or broken.
- Snap-on front cover making it both attractive, with no visible screws, and easier to install.
- Two resistance values to ensure compatibility, and selectable with jumpers to minimise installation errors.
- Optional clear lift up cover available for additional protection.

SPECIFICATION

- External dimensions: width 85 mm, height 85 mm
- Surface mounted depth with back box: 55 mm
- Flush mounted depth without back box: 20 mm
- Monitoring resistors: 470 Ohm; 680 Ohm, selectable
- Blocking Diode: IN4001 (50v), selectable
- Microswitch Rating: 12A 250V
- Standards: EN54 - 11
- Activation indicator:
 - Window displacement
 - Fluorescent yellow indicator in window
 - High visibility 360° LED
- Material: Case ABS plastic
- Flush Fitting:
 - European Gang Pattress
 - Standard BESA box, centres 60mm
- Cable entry: Back box 3 x 20mm (2 Top; 1 Bottom)
