

PAC Ops™ MIFARE DESFire® EV1 4K Smart Token

Beat the increasing risk of credential cloning with PAC’s newly designed Ops™ technology. This new credential format provides a level of security that meets AES128-bit accreditation when used in conjunction with our new range of GS3 Oneprox™ smart readers.

Built around the unique MIFARE DESFire® EV1 ID, PAC’s new credentials secure the user’s information from the risk of being duplicated and still provide 4K of space for use by other applications, such as cashless vending or PC logon.

PAC Ops™ integrates cutting-edge technologies with our market leading access control systems. By utilising the standard MIFARE DESFire® EV1 ID’s with our own unique method of securing user access details, PAC are able to provide a solution capable of delivering the highest level of security within the industry.

PAC’s Ops™ MIFARE DESFire® EV1 4K tokens complement our range of smart readers and provide both our new and existing customers with a method of eliminating the risk of credential cloning without compromising the operation of the system.

Designed to match the style and shape of the PAC token, our new MIFARE DESFire® EV1 4K token, offered in the same shaped robust plastic housing as the classic 21020, is the ideal ID device for use in harsh environments such as residential, utilities and heavy industry to name just a few.

- Ops™ - PAC’s unique security protocol
- Incorporates the standard MIFARE DESFire® EV1 4K Device
- 7byte unique serial number
- Fully ISO/IEC 1443 A 1-4 compliant
- Designed for harsh working environments
- Excellent read range when used with PAC readers
- Lifetime Guarantee*
- Ideal for use by other applications – cashless vending, public transport and many more

With a range of 8 different coloured clips, PAC MIFARE DESFire® EV1 tokens allow easy recognition to suit the most demanding and robust of environments.
