

RF-RPT

Wireless Repeater/Interface

In certain difficult premises, the RF Repeater can be positioned in an area of low radio signal strength and transfer those signals on to the panel via the "ABCD" comms. cable and card.

If the RF-INT is powered-up without the comms. card then it becomes an RF "bounce" repeater. This means that intrusion detectors in the vicinity of the unit are picked-up automatically and transferred wirelessly on to the panel via its antennae (and with an extra power boost). No programming is required but this system is not as efficient on end-device battery life as the comms. card system.

- Input Power: 13.7Vdc
- Current Consumption: 115mA max.
- Temperature: -10 to +40 °C
- Weight: 440g
- Size: 236mm x 166mm x 42mm
- BS8243 and PD6662 Compliant
- EN 50131-1 Grade 2
- Environmental Class II

SecureWave
868MHz Radio
