

Datasheet

ELECTRIC STRIKES/ WR Series - Weatherproof & Dustproof Euro Strikes

Product description

The WR Series has been designed for special installations where waterproof and dustproof features are required, such as outside installations and sterile environments (not suited for salt environments). It features a protected gasket seal and has a holding force of over 400kg measured at the jaw.

The series also features a manual hold-open function and built-in MOV (metal oxide varistor), offering a unique product for external pedestrian gates. The MOV protects your system from electric spikes that can cause damage to electronic control devices.

T2GE-12

Key features

- Weather- & dustproof Euro strikes
- Fail secure
- Handed - right or left versions
- Manual hold-open function
- Gasket sealed
- Built-in MOV

 Certification

 DEEE

 Certification

 IP65

 -15°C to 40°C

Product Specifications

Faceplate material: 306 stainless steel
(only the faceplate is stainless steel, making the strike unsuitable for salt environments)

Installation: Mortice installation

Holding force: 450kg

Cycles: tested to 300,000 operations

Electrical Specifications

Power input: 12Vdc

Consumption: 180mA
