Sealed against outside attack. Magnetically balanced to show that an outside magnet has been introduced.

Can be used with just the reed switch and no resistors – connect the yellow wire and the red wire. To include 1 resistor, twist the red & white wires together to link, then connect the yellow wire. To include 2 resistors, twist the red & white wires together to link then connect the green wire. Black and blue wires are the tamper loop.

The magnet side needs to be fitted 0 - 15mm away from the reed side, this is the most efficient position. Ensure when fitting the contact the green labels line up.
